

ICE Cream Swap and NFT collateralization for lending and borrowing.

Bob wants to use Ice Cream Swap to collateralize his Luramal ICE Cream NFT for some (aNFT) tokens, Bob also wants to swap half of the (aNFT) tokens for some ERG. Susie wants to swap some ERG for some ERDoge using Ice Cream Swap.

The (aNFT) tokens are backed by 75% ERG and 25% NFTs. NFT value is derived from oracle data points based off various sold floor prices from NFT markets.

NFTs are collateralized for up to 70% of the NFT current floor value. if it ever goes above then the user risks liquidation. (aNFT) token is minted on supply of NFT and burned on return of NFT to user.

for sake of argument in this example NFT's are worth 100 ERG
 ERDoge = 1 ERG
 (aNFT) = 1 ERG
